1 - 4. (canceled)

5. (original) A data storage medium, comprising:

a sector, the sector including header data and sector data;

the header data specifying whether the drive reading the data storage medium is

permitted to send the sector data in an unencrypted form to a requestor.

6. (canceled)

7. (new) A data storage medium, comprising:

a sector, the sector including header data and sector data;

the header data having a first value that specifies that a drive reading the data

storage medium is permitted to send the sector data in an unencrypted form to a

requestor; and

the header data having a second value that specifies that the drive reading the data

can only send the sector data in an encrypted form to a requestor.
